

MAWLANA BHASHANI SCIENCE AND TECHNOLOGY UNIVERSITY
SANTOSH, TANGAIL-1902

DEPARTMENT OF INFORMATION AND COMMUNICATION TECHNOLOGY

Lab Report No: 02

Course Title: Research Methodology

Course Code: ICT-3208

Lab Report on: Introduction in Research

Submitted By	Submitted To
Name: Kuldip Saha Mugdha ID: IT22018 Year: 3 rd Semester: 2 nd Session: 2021-2022 Dept. of ICT, MBSTU	Dr. Md. Badrul Alam Miah Professor Dept. of ICT, MBSTU

Date of Performance: 07-01-26

Date of Submission: 14-01-26

1. Introduction

This lab report focuses on the "Introduction of Research," which is the foundational chapter of a thesis. The introduction section of a research paper provides readers with essential information to understand the research area. It explains where the research comes from, why it matters now, and how the field has developed over time. A strong introduction answers what the field is about, what is happening now, and how it reached this stage.

2. Objectives

The main objective of this study is to understand the correct structure and components of a research introduction. The specific objectives include:

- To define the Background of the Study.
- To formulate a clear Problem Statement and Motivation.
- To establish Research Questions and Objectives.
- To determine the Scope and Significance of the Study.
- To understand the Thesis Organization.

3. Problem Statement

The Problem Statement clearly describes the specific issue that the research aims to address.

- **Purpose:** Its goal is to help readers immediately understand what problem the research is solving.
- **Requirements:**
 - Clearly state the exact problem the research focuses on.
 - Identify the main challenges or weaknesses in existing systems or methods.
 - Briefly state what the research aims to achieve.

4. Motivation

The motivation explains why the researcher wants to do this work and why it is important. It justifies why solving the problem is critical at the present time.

- **Key Elements:**
 - Connect the problem to current technological, industrial, or social needs.
 - Show how the problem affects users, organizations, or society.

- Mention technical goals such as efficiency, accuracy, automation, or security.
- **Risk Analysis:** Explain what could go wrong if the problem remains unsolved, such as increased cost, reduced performance, or security threats.

5. Research Questions and Objectives

Research questions are the main inquiries the research wants to answer and come directly from the problem statement.

- **Sample Questions:**
 - What problems exist in the current system?
 - How can the system be improved?
 - How well does the proposed solution work?
- **Differentiation:** Research questions define what the study seeks to answer, while research objectives describe the actions taken to achieve the goals.

6. Scope of the Study

The scope explains what the research includes and what it does not include.

- **Inclusions:** What areas, features, activities, technologies, or users the research will cover.
- **Exclusions:** What is not being studied and what readers should not expect.
- **Limitations:** Restrictions related to time, resources, technology, datasets, or sample size.

7. Significance of the Study

This section explains why the research is valuable and who will benefit from it.

- **Beneficiaries:**
 - **Researchers:** For future studies and learning.
 - **Developers/Engineers:** For building better systems.
 - **Students:** For understanding concepts.
 - **Organizations/Public:** For improved services or solutions.

Contributions:

- **Technical Contribution:** New technical knowledge added by the research.
- **Practical Contribution:** How the research is useful in real life.

8. Thesis Organization

The thesis organization tells readers how the thesis is structured. The standard flow includes:

- **Chapter 2:** Literature Review & Research Gap.
- **Chapter 3:** Methodology & Proposed System.
- **Chapter 4:** Results, Analysis, and Comparison.
- **Chapter 5:** Discussion & Implications.
- **Chapter 6:** Conclusion & Future Work.

9. Conclusion

In this lab report, we explored the essential components of writing an introduction for research. We learned that a robust introduction must clearly define the problem statement, justify the motivation, and delineate the scope of the work. Furthermore, understanding the significance and proper organization of the thesis is crucial for effective research communication.
